

Purposes

- Continuous technological development.
- Requiring perfection when developing products and services.
- Applying innovation solution in every project.
- Designing systems with high degree of complexity.
- Developing computational management systems for supporting business expansion.
- Creating high quality solutions in order to fulfill individual needs of each customer.

Commitment with the Customer

- System with distinct functions to satisfy each customer.
- Full integration between customers and Atonus personnel.
- Pursuing the best solution for individual customer needs.
- Total transparency concerning the adopted solutions.

Mission

- To develop solutions for the society in specific fields that demand specialized knowledge in computational vision, optics, fine mechanics, electronic and information technology.
